

**LIVESTOCK GUARDING DOG
PROJECT
PROGRESS REPORT DECEMBER 2021**

(COMPILED BY DEON CILLIERS AND CYRIL STANNARD)

December 2021

INTRODUCTION:

In order to assist farmers in the reduction of livestock losses on farms within cheetah range and in a proactive effort to conserve the free ranging cheetah in South Africa, Cheetah Outreach Trust initiated the Livestock Guarding Dog Project in partnership with the De Wildt Wild Cheetah Project in 2005. This initiative later moved to the Endangered Wildlife Trust where the Cheetah Outreach Trust continued the partnership for placement and monitoring of Livestock Guarding Dogs in the Eastern Territory of the Cheetah Distribution Range while placements in the Western Territory were done solely by the Cheetah Outreach Trust.

In 2013 the Cheetah Outreach Trust took over the sole placements of Livestock Guarding Dogs in Cheetah Range and continues placing Livestock Guarding Dogs as a means of a non-lethal predation management measure and to secure habitat for cheetah and other carnivores by reducing predator conflict with farmers. The Cheetah Outreach Trust believes that the use of Livestock Guarding Dogs to manage predation is a very effective method if applied correctly and endeavours to establish the culture of using Livestock Guarding Dogs within South Africa as well as in adjacent areas within Botswana. The Cheetah Outreach Trust established a partnership with Green Dog Conservation in 2013 to manage the Irwin's Guardian Livestock Guarding Dog Stud from which Livestock Guarding Dog puppies are bred for placement on farms by the Cheetah Outreach Trust.

The Cheetah Outreach Trust has also initiated various pilot projects outside of cheetah range in South Africa to introduce livestock farmers across the country to the use of livestock guarding dogs. For this purpose, the Cheetah Outreach Trust has used an indigenous breed of Africanis dog called the Maluti Highland Livestock Guarding Dog which originated from Lesotho where it has been used as a livestock guardian. The Maluti is an ideal livestock guardian for livestock farmers that have predation issues with the smaller predators such as black-backed jackal and caracal. Farmers who were part of these pilot projects continue to use the Maluti dogs as well as the Anatolian Shepherd Livestock Guardian Dog.

The Cheetah Outreach Trust is conducting camera-trapping on farmland areas on an ongoing basis to monitor cheetah presence and absence together with other predator species such as brown hyena, leopard, spotted hyena and African Wild Dog. In a further effort to assist the farming community in human/predator conflict mitigation, the Cheetah Outreach Trust will in some exceptional cases assist with the relocation of predators such as cheetah, leopard and brown hyena in areas where tolerance levels are not yet conducive to the presence of these predators. Such relocations allow the Cheetah Outreach Trust to initiate the conversation with the respective farmer/s regarding a long term approach of predator and livestock management which includes the use of livestock guarding dogs. The Cheetah Outreach Trust also recently started collaring free roaming cheetahs in areas where they occur as well as in areas where livestock guarding dogs have been placed to investigate the natural movement of these free roaming cheetahs on farmland areas and across international borders as well as the interaction of these cheetahs with the livestock guarding dogs and livestock herds. The information gathered is shared with the farming community as well as other cheetah conservation organisations and Conservation Authorities to develop a greater understanding of free roaming cheetahs that occur on farmland areas. This also makes it easier to develop and implement long term conservation strategies and farmer/cheetah conflict mitigation measures based on relevant and real time data.

All this work with the farmers to create tolerance towards predators including cheetahs has the long term effect of securing cheetah and predator tolerant habitat for these various predators that live outside of protected areas on farmland while also introducing farmers to non-lethal predation management options. Recent studies have shown that 77 percent of the current cheetah distribution range occurs outside of protected areas and that cheetahs only occur in 10 percent of their historical distribution range. More in-depth studies regarding predators on farmland areas are critical to give current and up to date relevant information to the farming communities that live with these predators in order to create a better understanding. Data from the collared free roaming cheetah are fed back to the farming communities to strengthen the knowledge and tolerance levels towards these cheetahs.

PLACEMENT AND MONITORING OF LIVESTOCK GUARDING DOGS:

To assess the progress and working abilities of livestock guarding dogs, continuous monitoring was done during 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020 and in 2021 by means of visitations, telephonic discussions and questionnaires. This has been the key to the overall success of the Cheetah Outreach Trust Livestock Guarding Dog Project. For the purpose of this report we will only include the livestock guarding dogs placed during the last two years in the detailed report, while the previous placements and the status of those livestock guarding dogs are summarised in Annexure 1. The global Covid-19 pandemic and subsequent lockdown regulations in South Africa have had some effect on the monitoring of the placed livestock guarding dogs during 2020 and 2021 but we are positive that this will become better with the gradual lifting of the lockdown in South Africa as well as in other parts of the world in 2022. These lockdowns have seriously and negatively impacted the available funding from many of our donors due to economic breakdowns brought on by the Covid-19 lockdowns. Our breeding project at the Irwin's Guardian Stud also went through a

DATA CONTAINED IN THIS DOCUMENT IS THE PROPERTY OF THE CHEETAH OUTREACH TRUST & MAY NOT BE USED WITHOUT WRITTEN CONSENT.

very quiet period with our females only coming into heat late in 2021 which had a knock-on effect on the number of our placements done during 2021.

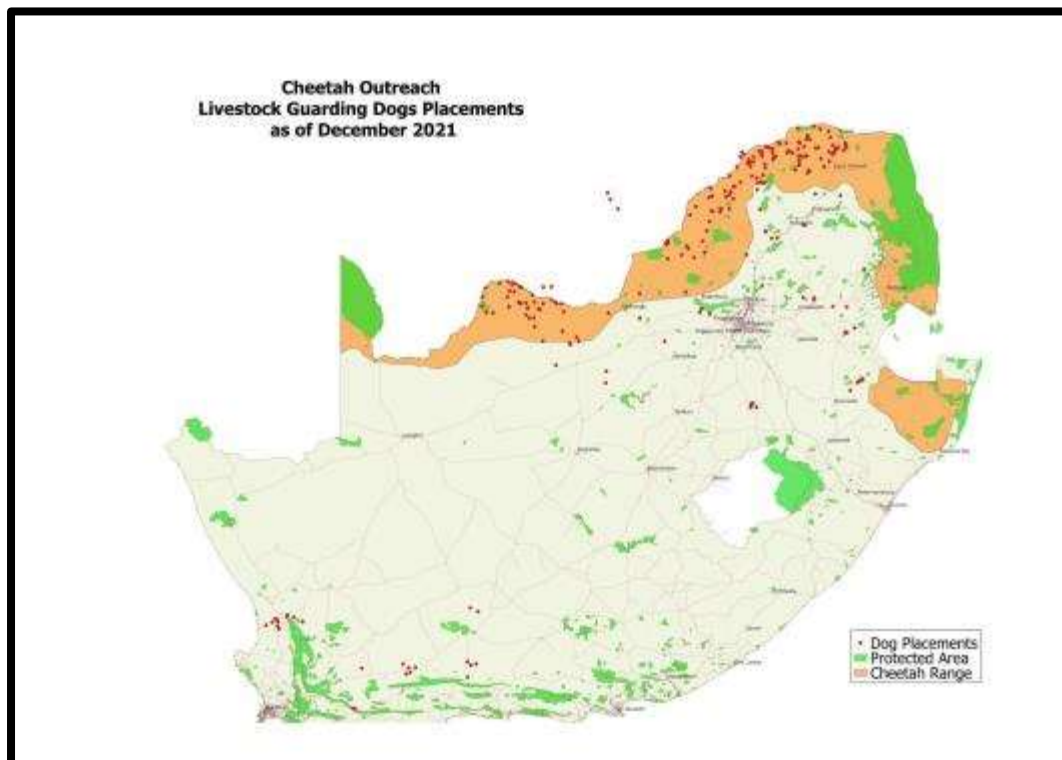

Figure 1: Placement of LGD's from 2005 to December 2021

SUMMARY OF ALL LIVESTOCK GUARDING DOGS PLACED BETWEEN DECEMBER 2019 AND DECEMBER 2021:

Seventy Third Placement (April 2020)

This litter of puppies was born at the Irwin's Guardian Stud from dam Irwin's Guardian Pandora and sire Irwin's Guardian Torres.

- *Irwin's Guardian Stelly* was placed on a goat farm close to the Zimbabwe border in the Eastern Territory of the cheetah range in South Africa. Stelly has bonded well with the herd and has developed into a very effective and valuable livestock guardian dog. The farmer remains very satisfied.
- *Irwin's Guardian Fiaa* was placed on a farm with goats and indigenous sheep just west of Alldays in the Eastern Territory of the cheetah range in South Africa. Fiaa has grown into a formidable livestock guardian and the farmer is very satisfied. Fiaa is very protective and although he likes to play with his goats from time to time he remains a very good livestock guardian.

Seventy Fourth Placement (May 2020)

This litter of puppies was born at Green Dogs Conservation and donated to the Cheetah Outreach Trust to place as livestock guardian dogs within the cheetah distribution range in South Africa.

- *Izzie* was placed with sheep on a farm south of the Zimbabwe/Botswana border. Izzie has adapted well to her role as a livestock guardian. She displayed some behavioural issues late in 2020 and was returning back to the kraal during the heat of the day without her sheep. This can be attributed to the lack of water and shade during the extremely hot summer month. She continued with this behaviour and it was decided to move her to another farm where she is working with an older Anatolian "Irwin's Guardian KK" from the project. This seems to have sorted out her behaviour issue.

Seventy Fifth Placement (June 2020)

This litter of five puppies were bought from a reputable breeder and placed as livestock guardian dogs as part of the Bushmans Kloof Wilderness Reserve and Wellness Resort project in the Western Cape of South Africa.

- *Thandi* has made a huge turnaround; after her issue with the rams she has now settled and has become an integral member of the herd. She guards them very aggressively and does not let anything or anybody stray near them. Her owner is very happy with her and what she has achieved as a young guardian..
- *Aza* died due to snake bite. In an attempt to do good his owner shut him in a horse stall on a snowy evening during the past winter. Unbeknownst to the owner a snake was hibernating in there as well. The next morning the owner found *Aza* dead in the stall with no visible injuries. He decided to clean out the stall and in doing this he found the snake responsible for *Aza*'s death. *Aza* was replaced during the December 2021 placements in the project.
- *Jambo* is doing a wonderful job on the farm and his owner is full of praise for him even when the leopard killed two sheep in *Jambo*'s herd. This happened when he was guarding the herd close to the mountain in a very dense area. The leopard only had a chance to kill the two sheep before *Jambo* chased it up the mountain and out of the area. Despite the loss the owner accepted it and said if not for *Jambo* the losses would have been greater.
- *Bheka* has become a very attentive guardian. He has stopped his roaming and now guards his herd constantly. His owner is very happy with the change in his behaviour and sees how effective he is in keeping his herd safe.
- *Obi* was brought back from the natural grazing area to the homestead when he roamed and ended up on a neighbouring farm. The roaming was not the most serious problem, rather the fact that the neighbour is known to use poison on his farms. It was thus more for the safety of *Obi* than the bad behaviour that he was brought back. He will now be monitored close to the house and is under corrective training to stop his roaming.

Seventy Sixth Placement (July 2020)

This litter of puppies was born at the Irwin's Guardian Stud from dam Irwin's Guardian Gem and sire Irwin's Guardian Torres.

This litter was placed in the eastern territory of the cheetah range.

- *Irwin's Guardian Satch* was placed as a replacement for *Themba*, one of the older dogs of the project that has been retired due to old age in the Alldays area. *Satch* has grown into a good looking and trustworthy livestock guardian that has already guarded her flock successfully. The farmer is satisfied with her progress.
- *Irwin's Guardian Gunter* was placed with goats on a farm in the Lephalale area. *Gunter* is a very shy dog but he has bonded very well with his goats and is presenting all the traits of a good livestock guardian dog. He has joined his flock of goats in the field and has not had a single loss due to predation. The farmer sold his goats during the last part of 2021 and *Gunter* was moved to a new farm. During this move we found that he had some issues with his knees and he is now on permanent medication to assist with this condition..
- *Irwin's Guardian Freya* was placed with a small flock of sheep in the Dwaalboom area after the farmer lost the majority of his sheep to predation. *Freya* has adapted well and has a very good bond with her sheep. The farmer remains satisfied with her.
- *Irwin's Guardian Aura* was placed with a flock of goats in the Mookgopong area. This is on the boundary of the cheetah range. *Aura* has bonded well with the goats and has grown into a very good livestock guardian. She is loyal to her goats and stays with them the entire day when they are out in the bush. The farmer is very satisfied.
- *Irwin's Guardian Amir* was placed on a farm in the Lephalale area where cheetahs are often seen. She has bonded very well and joins her flock of goats when they graze in the bush daily. The farmer is very satisfied with her.
- *Irwin's Guardian Anna* was placed on a farm in the Dwaalboom area with a flock of goats. She has bonded well and although she is very friendly she remains very loyal and protective over her goats. The farmer is satisfied with her.
- *Irwin's Guardian Milo* was placed with a flock of goats in the Tshipise area. This area has a high density of predators including a pack of African Wild Dogs. She has bonded very well with her goats. The farmer is happy with *Milo*.
- *Irwin's Guardian Obasi* was placed with a herd of cattle in the Lephalale area in an area where cheetahs are seen often. *Obasi* had bonded very well with his cattle and stayed with them the entire day and night, only returning to the kraal once a day with the herd for food and water. *Obasi* sadly did not return with his cattle near the end of 2021 and it is presumed that he was killed by a snake while guarding his cattle.
- *Irwin's Guardian Amahle* was placed as a replacement dog for *Irwin's Guardian Kyle* that was shot by a neighbour earlier in 2020. *Amahle* has bonded very well with her goats and has proven to be very loyal since a very young age. The farmer is very happy with her..

Figure 2: Irwin's Guardian Amahle with her goats

Seventy Seventh Placement (March 2021)

This litter of puppies was born at Irwin's Guardian Stud from dam Kestrel of Green Dogs Conservation and sire Irwin's Guardian Torres.

This litter was placed in the western territory of the cheetah range.

- *Saluda* is doing a great job on the farm. Her owner is very happy with her as a working dog and she has had no losses in her herd.
- *River* is doing well and has settled in with the herd. He did go through a roaming and confused phase. The confusion started when the kids were left in the kraal and the ewes were let out to graze. This confused him as he did not know which group he had to stay with. After changes to the management of the herd he now goes out with the whole herd and stays with them doing what is expected of him.
- *Cara* is doing very well and never leaves her herd of sheep. During the last part of the year her owner died due to Covid-19 and his wife and small children went to stay with her parents. Cara still did her job and was cared for by the labourers on the farm.

Seventy Eight Placement (July 2021)

Only one placement was made. This was due to a breeding loan with Green Dogs Conservation using one of the Irwin's Guardian Stud male breedings dogs. This pup was placed in the Eastern Territory of the cheetah range

- *Minzi* was placed as a replacement dog on a farm close to Vivo in Limpopo. The farmer has an eight year old male Anatolian Livestock Guardian Dog named Titan that he received through the project in 2013. Titan defended his flock of goats against a predation event earlier in 2021 and unfortunately died during this heroic event. Minzi has bonded well with her goats and has joined them when they graze in the bush. She is proving to be a very dedicated livestock guardian. Minzi was fully vaccinated and was also sterilised in December 2021.

Seventy Ninth Placement (November 2021)

This litter was born at the Irwin's Guardian Stud from Irwin's Guardian Garland (Dam) and Irwin's Guardian Delarey (Sire). They were placed in the Eastern Territory of the cheetah range.

- *Irwin's Guardian Gidjee* was placed as a replacement for Irwin's Guardian Wessex (9 years old) who is nearing his retirement age. Gidjee is a shy individual who prefers the company of her goats to that of humans. She has recently completed her bonding phase and has started following her flock of goats to the bush under the guidance and supervision of Wessex. Gidjee has been fully vaccinated. She is presenting the traits of a good livestock guardian.
- *Irwin's Guardian Angel* was placed as a replacement for Wardance (10 years old) who is nearing retirement age. Angel is a shy livestock guardian. She has completed her bonding phase and has started following her goats to the

DATA CONTAINED IN THIS DOCUMENT IS THE PROPERTY OF THE CHEETAH OUTREACH TRUST & MAY NOT BE USED WITHOUT WRITTEN CONSENT.

bush on a daily basis. She has her own flock of goats and does not accompany Wardance with his flock. Angel is fully vaccinated.

Figure 3: Irwin's Guardian Angel with her goats in kraal

Eightieth Placement (November 2021)

This litter was born at Irwin's Guardian Stud from Irwin's Guardian Ester (Dam) and Irwin's Guardian Torres (Sire). They were placed in the Western Territory of the cheetah range.

- *Irwin's Guardian Clyde* was placed on one of the farms of Jannie Strumpher in the south of Botswana. He asked to join the project after seeing the successful placements on his South African neighbours' farms. Clyde will be guarding a herd of goats in an area where cheetahs are very active currently.
- *Irwin's Guardian FIAA2* was also placed on a farm owned by Jannie Strumpher. She was placed there when the farmer she was supposed to go to decided at the last minute to withdraw from the project. She will also be guarding a herd of goats for Jannie.

Figure 4: Irwin's Guardian FIAA2 with her farmer

- *Irwin's Guardian Roxy* was placed on the farm of Johan Kemp on the border with Botswana near Bray. He requested a dog after seeing how successful they are on other farms he manages. Johan suffered a devastating fire on his farm a few years back and was only now able to re-establish a herd of goats on his farm. He needed a reliable strategy to guard his investment.

DATA CONTAINED IN THIS DOCUMENT IS THE PROPERTY OF THE CHEETAH OUTREACH TRUST & MAY NOT BE USED WITHOUT WRITTEN CONSENT.

- *Irwin's Guardian Yeti* was placed on the farm of Jan van der Westhuizen near Paddon on the Botswana border. He will be guarding a herd of goats for his owner in a high activity area for cheetahs. His owner asked to join after observing how successful the dogs are on other farms near him.
- *Irwin's Guardian Joshua* was placed on the Matopi Farms in the Bray area. He will be guarding a herd of goats for his owner on a huge farm on the Botswana border.
- *Irwin's Guardian Goldie* was placed on the farm of Gielie Jones near Bray. She is a replacement for the very old Khan (12 years). Khan still goes out every day but he is nearing retirement and the decision was made to get his replacement settled in on the farm before he retires.

Eighty First Placement (December 2021)

This litter of five puppies were bought from a reputable breeder and placed as livestock guardian dogs as part of the Bushmans Kloof Wilderness Reserve and Wellness Resort project in the Western Cape of South Africa. The puppies were placed on farms in the Clanwilliam district to do their part in the protection of the Cape Leopard. *Titan, Keno, Zack, Venus and Quin* are all still in their training kraals and bonding with their new family members.

Figure 5: Titan at placement with herder at placement

SNAKE AVERSION TRAINING:

The first group of dogs received their training during October 2011. This was the first time such training has been given to working dogs in the veld in South Africa by any organisation using livestock guarding dogs.

Snake aversion training is given to all new placements when they reach the age of 7 to 8 months. The snake aversion training has proven very successful with a dramatic decline in losses due to snake bite over the past few years. We have secured snake scent from the National Zoo in Pretoria to conduct snake aversion training on our latest placements.

CURRENT STATUS OF ALL LIVESTOCK GUARDING DOGS PLACED.

The Cheetah Outreach Trust monitors all placements on an ongoing basis. All new placements are visited and monitored monthly for the first 12 months in order to ensure that any problems that might occur are identified and addressed immediately by using effective corrective methods. After 12 months, the livestock guarding dogs are signed over to the farmer and all dogs under 2 years of age are then visited and monitored twice a year while older dogs are visited once a year. By doing this the Cheetah Outreach Trust retains constant contact with the farmer and the livestock guarding dog.

The Cheetah Outreach Trust has placed 353 Livestock Guarding Dogs until the end of December 2021. Of these placements, 295 have been successful placements with dogs working and guarding their livestock and with 58 dogs removed in total due to behavioural problems. This is a 84% successful placement rate and has not changed since the previous report. See figure 4 for an illustration of this status breakdown. Of these 295 successful placements, 42% are currently still working and

DATA CONTAINED IN THIS DOCUMENT IS THE PROPERTY OF THE CHEETAH OUTREACH TRUST & MAY NOT BE USED WITHOUT WRITTEN CONSENT.

guarding livestock, 8% have been retired, 47% died in service and 2% have been moved out of cheetah range. Figure 5 illustrates this status breakdown of the successful placements since 2005.

Annexure 1 is a total list of all livestock guarding dogs placed since 2005 and the current status of each individual.

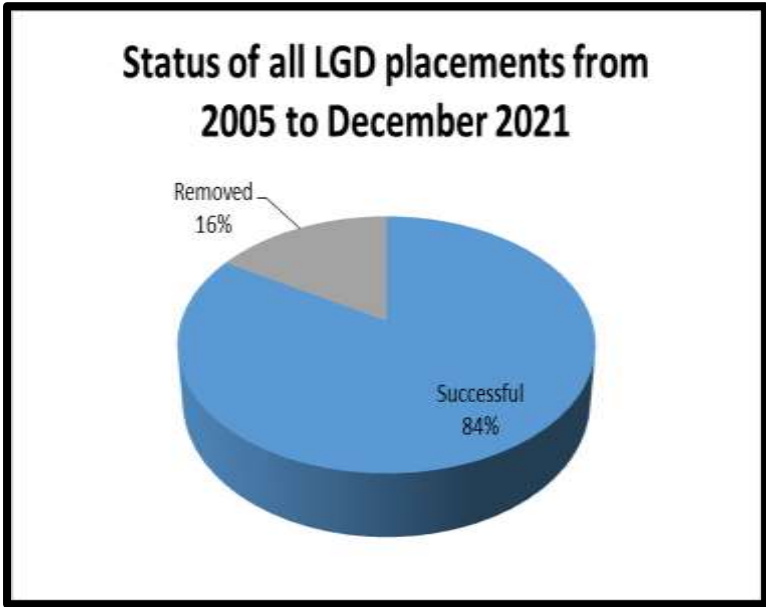

Figure 6: Status breakdown of LGD's placed

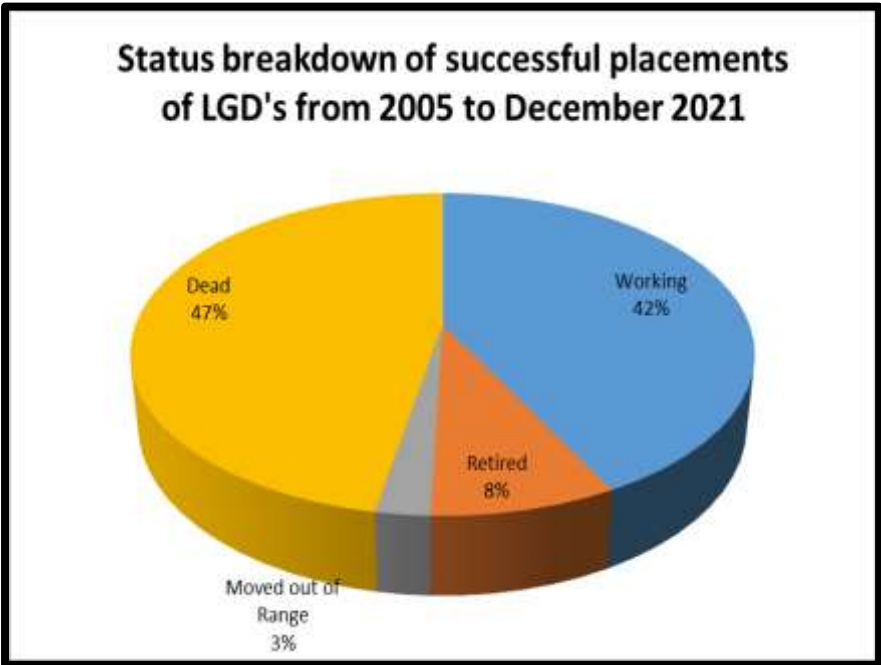

Figure 7: Status breakdown of successful placements from 2005 to December 2021

STOCK LOSS AND STATUS OF LIVESTOCK GUARDING DOGS:

All placements of livestock guarding dogs by the Cheetah Outreach Trust are done in order to mitigate the conflict that exists between the farmers and the cheetah and other carnivores that prey on the livestock on the various farms. The reduction of predator losses by the farmer has to be measured in order to monitor the effectiveness of livestock guarding dogs placed on an ongoing basis. Information is gathered from the farmer relating to annual losses by predation prior to placement of the

DATA CONTAINED IN THIS DOCUMENT IS THE PROPERTY OF THE CHEETAH OUTREACH TRUST & MAY NOT BE USED WITHOUT WRITTEN CONSENT.

livestock guarding dog and then any further losses after placement due to predation. This is monitored annually through the normal visits and monitoring done by the Cheetah Outreach Trust field officers. All this data is captured into a centralised database. In all cases predation after placement of the livestock guarding dog has been reduced and in some cases totally eliminated.

During the period December 2019 to December 2021, 33 livestock guarding dogs were placed and were collectively guarding a total of 4887 head of livestock. *Figure 6* represents a breakdown of the type and number of livestock guarded by these dogs placed within the period December 2019 to December 2021.

Due to the Covid 19 pandemic and related Government lockdown regulations which had an effect on the ongoing monitoring of the placed livestock guarding dogs no up-to-date data has been recorded for losses during this reporting period. For this reason this data will be excluded from this report.

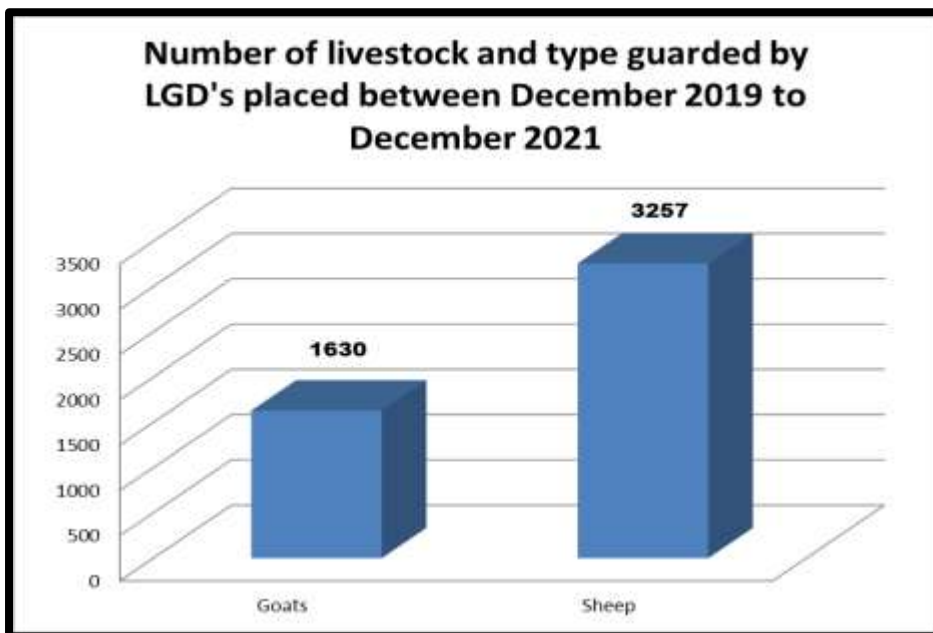

Figure 8: Breakdown of livestock guarded by LGD's placed from December 2019 to December 2021

PLACEMENTS MADE JANUARY 2020 TO DECEMBER 2021

The Cheetah Outreach Trust has committed itself to the placement of twenty new pups each year in the Eastern and Western Territory combined. For the period December 2019 to December 2021, 15 placements were done in the Eastern Territory of which 4 were replacements. In the Western Territory 9 placements were made of which 2 were replacements. The Bushmans Kloof Project saw the placement of 10 puppies during this period of which 1 was a replacement. The reason behind the low placement rate in 2021 was that the female breeding dogs at the Irwin’s Guardian Stud only came into heat very late in 2021.

BREEDING FACILITY

Irwin’s Guardian Livestock Guarding Dog Breeding Facility at the Green Dogs Conservation property close to Alldays in Limpopo Province has now been operating successfully for a number of years. All vaccinations for the breeding dogs are up to date. The food of all the dogs in the breeding project is proudly sponsored by Ultra Dog and the Cheetah Outreach Trust is proud to have Ultra Dog as a partner in this project. Two litters of pups were born at the breeding facility in 2020 from two females and three litters were born during 2021.

LIVESTOCK GUARDING DOG BREEDING PROJECT BREEDING STOCK

| Breeding Dog | Sex | Age | General. |
|--------------|--------|---------|--|
| Morrison | Male | 8 years | Moved to Irwin's Guardian Stud in June 2015. Sired pups with Garland in December 2015 and with Gem in April 2016. He was mated with Amanda in April 2016 but the mating was not successful. Morrison sired 5 puppies with Pandora in 2017 as well as with Ashkem and Garland. He sired puppies with Pandora and Garland in 2018 and with Green Dogs females Freya and Phudi. Morrison produced a litter of puppies with Pandora in 2019. Morrison mated with Garland at the end of 2019. Morrison mated with Garland May 2020. |
| Garland | Female | 8 years | Produced one pup at the Cheetah Outreach public facility. Moved to Irwin's Guardian Stud in September 2015. Produced a litter of pups at the beginning of December 2015. Garland produced a litter of 5 pups on 26 October 2017 sired by Morrison. Garland produced a litter of 9 pups in June 2018 again sired by Morrison. Garland mated with Delarey soon after his arrival and had a litter of 8 puppies. Garland produced a litter of four pups in December 2019. Two of these pups passed away within the first weeks of being born. Garland mated with Morrison in May 2020 but no pups were produced. Garland produced three healthy pups in December 2020 after a mating with Torres. Garland also produced one small litter after mating with Delarey during 2021. |
| Torres | Male | 4 year | Received back as a result of a breeding donation from Hannelie Liebenberg. Torres carries the Kangal gene that was represented by previous male Onyx in the program. Torres produced a litter of pups with Gem in 2019. Torres produced another two litters in 2020. Torres mated with Gem and produced a litter of pups in May 2020. Torres mated with Garland and produced a litter of three pups in December 2020. In 2021 Torres mated with Ester and produced a litter of puppies. |
| Delarey | Male | 4 year | Delarey was donated to the Irwin's Guarding Stud by the Cheetah Conservation Fund in Namibia and represents new unrelated genetics. He mated with Garland soon after his arrival. Delarey produced a litter of puppies with Garland in 2019. In 2021 Delarey sired two litters of puppies, one with Garland and one with Tiaki |
| Tiaki | Female | 2 year | Donated to Cheetah Outreach Trust by the Cheetah Conservation Fund Namibia. She mated with Delarey in 2021 and had one litter at the end of 2021. |
| Ester | Female | 3 years | Donated by a private breeder. Ester mated with Torres in 2021 and produced one litter of puppies. |

Figure 9: Irwin's Guardian Garland with her pups

DOGS REMOVED FROM BREEDING PROGRAM

| Breeding Dog | Sex | Reason for removal | General. |
|--------------|--------|--------------------|--|
| Woody | Female | Died | Died during complications when giving birth. |
| Helen | Female | Died | Due to age, ambassador at the Cheetah Outreach Trust; died of old age |
| Lucy | Female | Died | Due to age, ambassador at the Cheetah Outreach Trust; died of old age. |
| Nicola | Female | Died | Due to age, ambassador at the Cheetah Outreach Trust; died of old age. |
| Morocco | Male | Rehomed | Poor hip assessments. Rehomed as companion dog. |
| Thor | Male | Rehomed | Poor hip assessments. Rehomed as companion dog. |
| Valkeri | Female | Rehomed | Poor hip assessments. Rehomed as companion dog. |
| Chenon | Female | Rehomed | Poor hip assessments. Rehomed as companion dog. |
| Melda | Female | Rehomed | Unreliable breeder. Rehomed as companion dog. |
| Angel | Female | Rehomed | Unreliable breeder. Rehomed as companion dog. |
| Llondiwe | Female | Rehomed | Failed hip and elbow scans; not suitable for breeding. Rehomed as companion dog. |
| Wardance | Male | Died | Died in a car accident. |
| Lotte | Female | Rehomed | Hip issues; not suitable for breeding. |
| Aslan | Male | Died | |
| Mercedes | Female | Retired | Due to age, rehomed as companion dog. |
| Jeanne | Female | Rehomed | Ambassador at the Cheetah Outreach Trust. |
| Onyx | Male | Died | Died of natural causes. |
| Banu | Female | Died | Killed by a cobra. |
| Togo | Male | Rehomed | Infertile due to snake bite. |
| Ashkem | Female | Died | Killed by a cobra. |
| Minoe | Female | 10 years | Minoe did not produce pups and has been retired. |
| Pandora | Female | 12 years | Retired and rehomed as companion dog. |
| Gem | Female | 10 years | Retired as a companion dog. |

VISITORS TO THE PROJECT:

Wild Wonders and the Rare Species Fund visited the project during 2021.

PREDATOR CONFLICT WORK:

Since December 2019 seven leopards were managed as part of conflict mitigation with farmers in Limpopo. One young leopard sub adult female is undergoing wilding as she is too young for release at the moment. During the same period 14 cheetah complaints were responded to with 6 cheetahs (4 males and two females) collared and released back onto farmland. Two of these males that were in a coalition were poached alive presumably for the illegal trade in Botswana. The one collared female had a litter of four cubs and she was re-collared at the end of 2021 as her collar was running flat. Two cheetah sub adults (one male and one female) were relocated into the cheetah meta-population reserve network in South Africa, with 1 cheetah (male) currently in rewilding and pending relocation to the cheetah meta-population reserve network. Five sub adults (two males, two females and one male with a serious eye injury) were received as orphaned sub-adults. The male with the eye injury will remain in captivity and will contribute to the captive population genetics as he cannot be released with one eye. The remaining four will undergo a wilding process before they will be released early 2023.

Long term camera trapping took place on five farms in the Eastern Territory, two in Steenbokpan, one in Lephalale and two in the Maasstroom area. Plans have been put in place to capture and collar a coalition of cheetah males in the Maasstroom area to learn more about their movements, particularly where livestock guarding dogs are present. These cheetahs have up to now evaded the capture cage set up to catch them.

The cheetah conservation work and farmer conflict mitigation efforts in the North West Province have started to snowball since the first collaring and re-release of cheetahs in that area in 2020. The North West Department of Economic Development, Environment, Conservation and Tourism has given us all the support we need to assist farmers in this area and to continue with the satellite collaring project on the free roaming cheetahs.
